

THEY'RE LOUD. They're annoying. But car alarms can keep thieves from messing with your vehicle. Loud signals, honking horns and flashing headlights will make breaking in to your car much harder. Here are some other ways you can protect your wheels:

BE ALARMED

- **Kill Switches:** These devices use a hidden switch to cut power to your vehicle's ignition or electronic fuel pump. The thief can crank your engine, but can't make it start.
- **Fuel Switches:** This switch cuts off the fuel supply. Either the vehicle won't start or will run out of fuel in a short distance.
